

ABOUT US

We do believe that cryptocurrencies are the future.

The mission that guided Centurion Service - the manufacturer of CryptoATM crypto machines, was to make the process of buying and selling cryptocurrencies as simple as possible. Everyone who has used a traditional ATM at least once in their life will be able to handle our devices without any problems. A large screen and a clear interface ensure convenient operation and the program itself is very intuitive. It guides the user step by step through the transaction until its very end.

Technologies

Based on experience, passions, and current market trends, we have created a cryptocurrency ATM for everyone. Centurion's original project is not only the terminal itself, but also the entire back office and a platform. Hundreds of hours of our team's work, thousands of hours of testing allowed us to enter the market with a product that will meet the expectations of even the most demanding customers.

A solid housing ensures the safety of components and funds in the device and hinders potential theft. When creating our devices, we used proven components from reputable suppliers: Suzo Happ, CPI MEI, Fujitsu, which will allow for trouble-free operation and ensure security against potential fraudsters. In addition, users can check the transaction status on the website at any time. Withdrawals can be made at any time in the future, no need to wait at the machine.

Our advantages

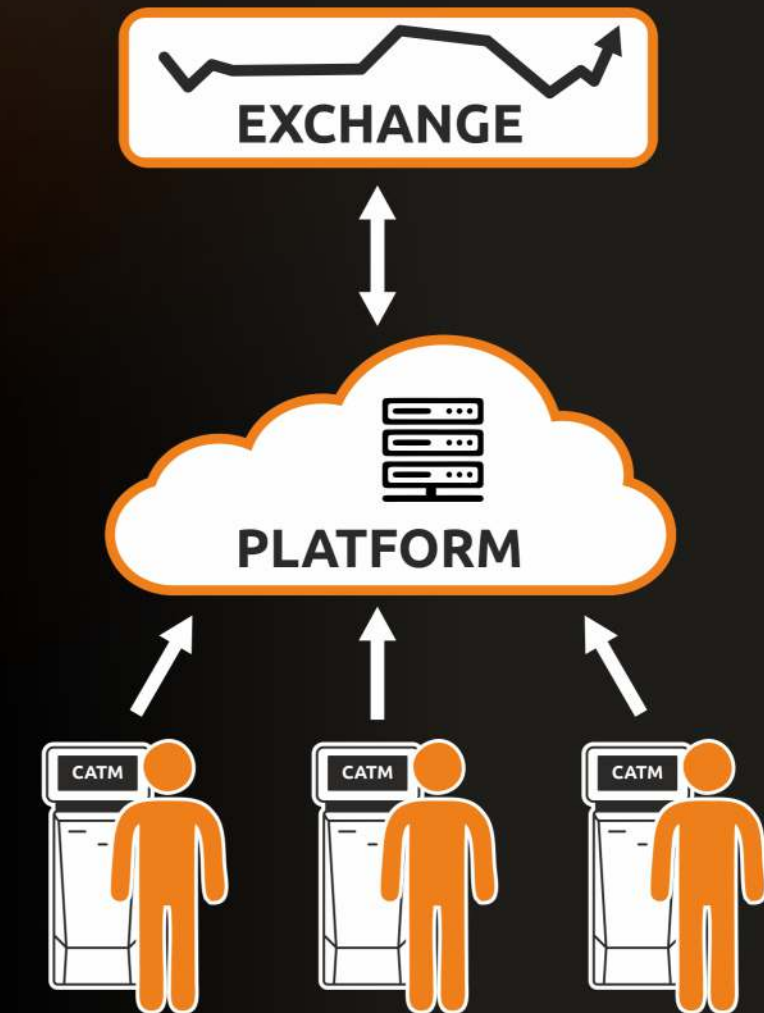

A stand-alone terminal with a modern design, made of thick steel, with the possibility of wall or floor mounting, extensively developed back office, allowing remote management of each device, a wide range of settings are just some of our advantages. We are connected to the exchange, and we keep our cryptocurrency resources in stable coins, which eliminates the risk of loss and depletion of our portfolio in the event of a decrease in the value of the cryptocurrencies. Due to the number of management options, we can adapt our devices to even the most stringent jurisdictions (KYC/AML). We can easily add new languages. Each device is equipped with an uninterruptible power supply (UPS), which will ensure that the user can complete the transaction even in the event of a power failure. The security of our device is supervised by an additional alarm control panel. Available cryptocurrencies: BTC, ETH, USDT, XRP

CRYPTOATM

CryptoATM ATMs are made with the customer's convenience in mind. A large and legible screen, a simple and intuitive interface will allow you to make transactions in a very short time, even for users who have not previously dealt with the purchase or sale of cryptocurrencies.

PLATFORM

If you choose our solution, you will receive remote access to the back office along with the device. There you will find options such as:

- Remote device reset
- Enabling and disabling buy/sale options,
- Setting the minimum and maximum value of operations with and without KYC
- Setting the transaction commission for the operator and each device separately
- Remote updating of device software,
- Look at each transaction in detail,
- Configuring the exchange,
- Crypto balance monitoring,
- Monitoring the cash balance in devices,
- Monitoring the remaining paper length in the thermal printer,
- Performing KYC verification, checking the status of each verification
- Setting up e-mail notifications via the integrated Mailchimp gateway
 - Errors on ATM
 - Paper level (alarm below a given value)
 - Balance of funds in ATM (alarm below a given value)
 - Crypto status (alarm below a given value)
- Create advertising campaigns in Mailchimp
- View and generate financial reports
- Management of regions, employees and terminals
- CoinATMRadar integration,
